

SMART TAILORED MOBILITY

- Full range of multi-service vehicles
- Global field service
- Jobsite logistics and flow studies

SMART LOGISTIC SOLUTIONS

Specialized in providing smart logistic solutions, we supply tailored-made Multiservice Vehicles (MSV). These special double-cabin vehicles easily drive in narrow spaces, especially in tunnels. They are able to carry heavy loads for various applications.

No matter how complex it gets and which environment you have to deal with, we deliver the best solution at the right time and right place.

MSV specificities

- Drive on all type of ground
- Heavy load up to 200 tons
- Minimum turning radius of 15m
- Wheel angle adapted to rolling surfaces
- Slope up to 20%

Options and additional equipment:

- Wide range of options available on request for the safety and the comfort of the workers
- Various equipment easily adapted to the vehicle for different uses: transport of tanks, crane, material platform, concrete mixer, extra-cabins and so on.

Located in South of France, we work with close partners for more reactivity, to reduce our carbon footprint and to guarantee a 'Made in France' quality.

FOR ALL YOUR PROJECTS

We are partners to all the major tunneling and civil engineering companies for their main projects in the world:

- Underground works: tunnels and mines boring, set-up and maintenance
- Other civil engineering constructions: bridges, dykes, viaducts or any other new or refurbished infrastructures

Wherever you are, we are committed to respect the environmental, ethical and technical principles.
We maintain the highest standards while answering your specific needs:

- ATEX, MSHA environments
- Transportation of dangerous materials
- Operating in extreme temperatures: - 30°C to +50°C
- Drive in various types of fields: rugged surface slopes, tilts, concrete, steel

FULL SERVICE COMMITMENT

We propose a full package of services to improve the efficiency of your logistics.

International field service

An international and expert team always by your side:

- Commissioning
- Spare & wear parts service
- Refurbishment and remanufacturing
- Worldwide technical assistance
- Training for drivers and maintenance operators

Innovation

TMS is attentive to the new requirements of civil engineering programs and develops new technologies for your logistics:

- Data management web application
- Driver guidance assistance options
- Electric engine for zero emission MSV

Dedicated project management

A dedicated project manager follows each client, from the design of the MSV to the end of its use on the worksite. This follow-up enables to make significant savings in the global project management.
